AWS' Emergency Spill Response Program

The Planning, Preparation & Response Steps

Our Emergency Spill Response Program is the easiest, most cost-effective and most comprehensive solution available in the United States. It provides clients with a complete Spill Risk Management Solution that ensures compliance with all local, state and federal requirements.

How It Works

AWS' Emergency Spill Response Program offers clients an easy, affordable and comprehensive Spill Risk Elimination Solution. It ensures compliance with local, state and federal regulations while strengthening clients' contingency planning preparation and reducing overall company exposure.

The Steps of the Program

- 1) AWS offers a complimentary [Contingency Planning](#) tool to help clients meet their emergency preparedness responsibilities.

Cost: Complimentary

- 2) AWS offers the use of our 24-hour emergency response telephone number, ensuring that clients meet their emergency response obligations under [49CFR Part 172.604](#).

Cost: We offer a choice of several affordable, high-value payment options to meet the needs and the budgets of every client.

- 3) AWS provides comprehensive Emergency Spill Response Management for any client spill response need throughout the United States. Clients call (800) 842-9792 or [Report a Spill](#) on our website 24/7/365. AWS responds immediately to determine the regulatory and environmental exposure, complete the required notifications and manage the spill response and clean up on our client's behalf. After the response is complete, AWS provides the client with a complete spill response report that consolidates all notifications, photographs, actions taken, personnel and equipment used, MSDS, manifests and shipping papers and cost.

Cost: Varies with the Nature of the Spill Event

Committed to eliminating Wastes and Risks of All Kinds™

The Value

Businesses, no matter how large or how small, are responsible at all times for the proper handling, storing and transportation of their potentially polluting materials. Whether the material is a product or a waste, hazardous or non-hazardous, if it has a potential to pollute, it presents a risk that must be managed and, if possible, eliminated. The AWS Emergency Response Program offers you that valuable protection.

Our Program

Your Value

Complimentary Contingency Plan	➡	Meets Your Preparation & Planning Responsibility
Emergency Response Telephone Number	➡	Covers Your Requirement Under the law
24/7/365 Emergency Spill Response	➡	Immediate Turnkey Protection When a Spill Occurs

In addition, unlike other Spill Reporting or Spill Response Programs, AWS' Program charges no retainers or up-front fees, coordinates every action, consolidates information into a comprehensive report and covers you and your company regardless of location or whether AWS is involved in the spill. No other company can offer you that.
